

Cisco Wide-Area Application Service (CWAAS) v4.1

Description

Cisco Wide Area Application Services is a 5-day class covering the WAAS v4.1 "Davis" product, especially for channel SEs and FEs. WAAS Mobile is also covered. This is a fundamentals course that can stand-alone for knowledge and skill content. It can also be foundational as a prerequisite for more advanced Design and Troubleshooting courses.

Course Objectives

After completing this course, student should be able to:

- Design and deploy a solution using Cisco WAAS v4.1 that optimizes and accelerates application performance over the WAN while enabling infrastructure consolidation from branches to data center.
- Understand Cisco WAAS hardware / software technology, design considerations, network integration, and system troubleshooting aspects. Also design and deploy WAAS Mobile clients.

Course Outline

- Introduction - Cisco Wide Area Application Services
- WAAS Quick Start
- Lab: WAAS Quick Start (In-Line)
- Implementation, Integration, Management
- Lab: Configure the NME-WAE and WCCP
- Lab: Configure Cisco WAAS Virtual Blade
- Lab: Configure Application Traffic Policies, Device Groups and Disk Encryption
- Cisco WAAS Application Optimizers
- Lab: Configure Application Optimizers and Printing
- Cisco WAAS Design and Troubleshooting
- Cisco WAAS Mobile Client Solution
- Lab: Configure Cisco WAAS Mobile Client

Who Should Attend

Channel Partners, Resellers, Customers, Employees.

Student Pre-requisites

- CCNA with CCNP strongly recommended
- SEs should have CCDA. a background in TCP
- exposure to layer 7 protocols recommended.

Length of Course

5 Days.

Maximum Class Size

12 Students

Class Locations

All APAC locations, subject to suitable venue.
